

## CNvUtility Version 3.5 beta Release Notes July 2016 (use with CNv version 3.5.\* onwards)

- Version number updated to match the CNv software version it goes with
- Polar Page:
  - Added visualisation of polar.
  - Show min / max wing loading

- Vario Page - options to support new vario functionality:
  - Speed to fly mode (none / classic / block)
  - Speed up tone & Slow down tone
  - Pre-empt climb
  - New option to use TE in cruise (for audio, needle, average)
  - Deadband (used by existing and new audio modes and is also alterable on the CNv)

- HOME Page: A specific name can now be assigned to the HOME waypoint in place of the generic "Profile Home".
