

ClearNav II Factory USB Updater Drive---Contains Latest Software (3.0.2.17)

NOTE: This software is only for use with the ClearNav II !!!

Use ClearNav Software v. 2.2.0.73 for the original ClearNav!!!

(NOTE: If you already have a CN II Factory USB Updater Drive with waypoints etc. that you want to keep, then go to the CN II Software version you want to update to and follow those instructions for updating your software only.)

Download the CN II Factory USB Drive and unzip the file to your pc.

Copy and paste the contents to a blank USB stick. We have had good results with USB brand SanDisk up to 16GB capacity.

The contents of the USB drive should then look like this:

Name	Date modified	Type	Size
Diagnostic Logs	8/3/2016 8:33 AM	File folder	
FlarmNet	8/3/2016 8:33 AM	File folder	
Languages	8/3/2016 8:33 AM	File folder	
Map Data	8/3/2016 8:33 AM	File folder	
Program Files	8/3/2016 8:33 AM	File folder	
Sounds	8/3/2016 8:33 AM	File folder	
ClearNavUpdater.cnx	2/15/2016 10:30 AM	CNX File	44 KB

Add any new waypoint or SUA files you want to put on your CN II to the appropriate folder under Map Data.

Insert the UpDater USB drive into the CN II and turn it on.

Check the boxes of the items you want to update.

When the update is finished, remove the USB stick and power cycle the CN II.
